Requirements Classification

R1

Implement a food diary that allows users to log their meals, track dietary habits, and receive personalized insights. The diary should support integration with food delivery services to seamlessly import meal data.

|------------------|------------|
| Category: | Functional |
| Priority: | High |

R2

Utilize machine learning algorithms to provide users with personalized meal and restaurant recommendations based on their dietary preferences, historical data, and health goals.

| | |
|------------------|------------|
| Category: | Functional |
| Priority: | High |

R3

Develop a community space within the app where users can share reviews and experiences, interact with other food enthusiasts, and engage in discussions.

| | |
|------------------|------------|
| Category: | Functional |
| Priority: | Medium |

R4

Integrate with major food delivery platforms like Uber Eats, Grubhub, and DoorDash to allow users to order food directly from the app.
